DETAILED ACTION

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 15 is rejected under 35 U.S.C. 103(a) as being unpatentable over Applicants' Disclosure of Admitted Prior Art as illustrated , e.g., by EP- A 937488, EP-A1044957, DE-A10300816 and EP-A 759316.

The above references are applied for the same reasons as set forth at the paragraph bridging pages 4-5 of the previous Office Action.

Claims 10-14 and 16-21 are allowed.

Applicant's arguments filed February 17, 2006 have been fully considered but they are not persuasive.

Applicants' argument that "...The prior art .. although relevant to the technical field of the invention, ***provides absolutely no teaching or suggestion to one of skill in the art*** of providing the "shadow regions of the internals of a distillation column with some means of covering or isolating the regions from contact with monomer thereby preventing polymer build-up in the column..." is not considered well-taken. The scope of claim 15 is not limited to the above limitation(s) commensurate with the argument.

Nonetheless, giving claim 15 its broadest reasonable interpretation, the known "double

–T support” and/or “U-shaped support” are covered, i.e., by being within the separating column covered by heating jackets (EP’ 957 col. 2, line 29). Also, the prior art described at page 5, lines 1-2 of the instant specification suggests the “surface -covering spraying”. Thus, one skilled in the art, aware of the polymerization problems, i.e., “locations appear here and there inside the distillation tower where polymerization is liable to occur” (EP ‘488 page 4, lines 46-50), in the process/method for separation of (meth)acrylic monomer would naturally cover any area in the column where polymerization could occur.

Absolute predictability is not a prerequisite for obviousness rejection. No commercial success is claimed, nor is any other factor indicating nonobviousness shown to exist.

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
